The information contained in this user guide is subject to change without further notification. FACTON GmbH does not accept any liability in this regard. The software described in this document is provided on the basis of a licensed contract and may only be used in accordance with the terms of that agreement.

FACTON and the FACTON logo are registered trademarks of FACTON® GmbH in Germany and/or other countries.

Microsoft, MS, Windows, Windows NT and Excel are registered trademarks of the Microsoft Corporation in the USA and/or other countries.

All other trademarks are the property of their respective owners.

LIABILITY

The Contractor is subject to unlimited liability only in the case of breach of duty or gross negligence on the part of its organization, management or auxiliary agents.

The Contractor assumes liability for minor negligence on the part of the organization and auxiliary agents only where a basic contractual obligation has been breached (cardinal obligation); in this case liability is limited to the typically foreseeable damages within the scope of the contract. The limitation of liability does not apply to damages arising from injury to life, body or health.

The liability for loss of data is limited to the costs which would normally be incurred for restoring appropriately and regularly secured backup copies.

The provisions of the German Product Liability Law remain unaffected (§ 14 ProdHaftG).

In the case of force majeure, which considerably obstructs or makes impossible the fulfillment of obligations by the Contractor, the Contractor reserves the right to postpone the fulfillment of obligations for the duration of the obstruction plus a reasonable period of recuperation. Strikes, lockouts or similar circumstances that affect the Contractor either directly or indirectly are considered force majeure.

SUPPORT

For any maintenance and support issues, you can contact the FACTON Support Team via phone or e-mail. You can find the support hours and phone numbers in your support contract.

1. FACTON EPC 15.1 CM

The version FACTON EPC 15.1 CM is a maintenance release with an extended range of functions.

1.1 SYSTEM REQUIREMENTS

see Technical Factsheet

1.2 BACKWARD COMPATIBILITY AND INSTALLATION

INSTALLED VERSION	BACKWARD COMPATIBLE	FACTON UPDATE	INSTALLATION
12.X	x		x
13.X	x		x
14.X	x		x
15.0	x	x	x

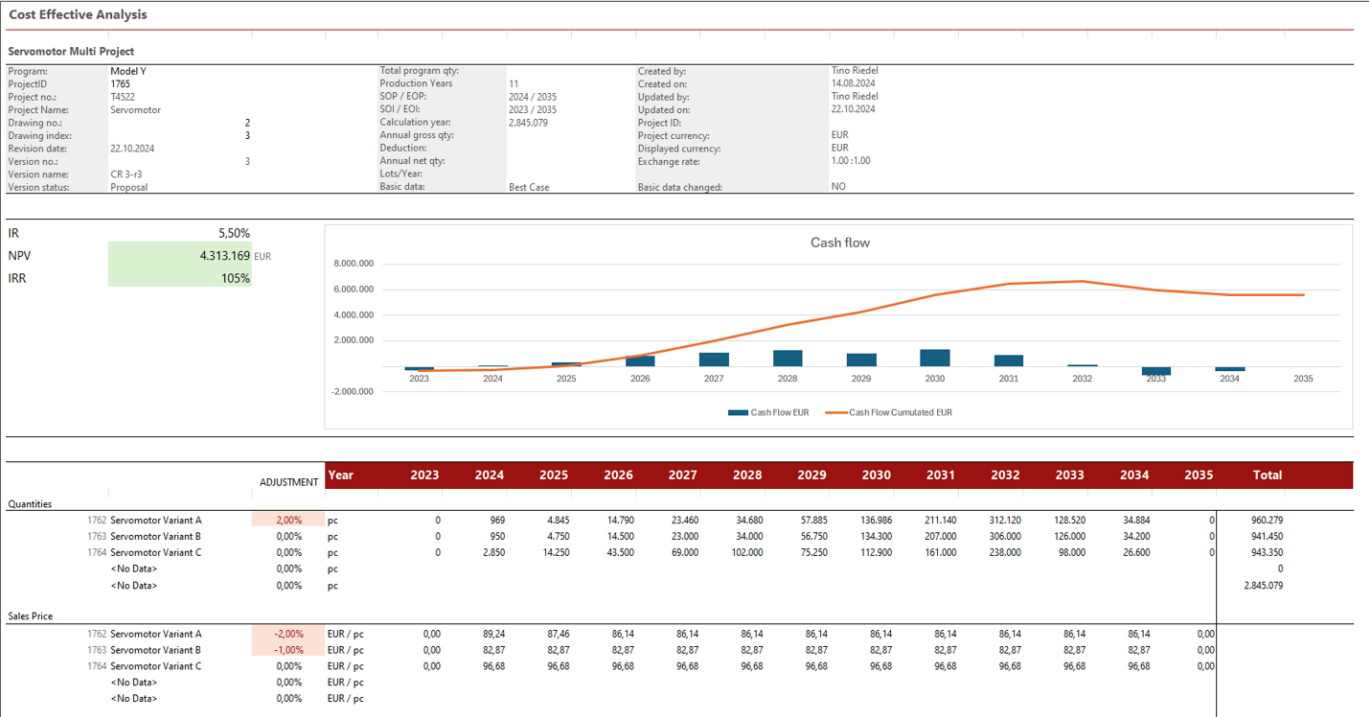

1.3 FUNCTIONAL ENHANCEMENTS

1.3.1 Excel Project Export

The project export from FACTON to Excel has been enhanced. Until now, the export was primarily used for customer-specific offer templates. Now, internal calculation results can also be exported into custom, standardized templates. Formats and formulas in Excel are not overwritten during this process. The exported data can therefore be immediately used for simple analyzes or simulations and can be shared further.

Example

In the following example, the calculation results of a multi-project are presented in an Excel template to simulate calculation results easily.

Enhancements Exporter

The following functions have been added to the exporter to provide the best possible support for the use cases:

- Export of the complete project structure (multi-project or individual project) including resolution of sub-projects in a **template**
- Export of values over the entire **project duration** (e.g. expenses in a specific year)
- Export of **project profitability key figures**
- Improved export performance

Administration and Settings

The settings have been consolidated for backward compatibility and expanded with additional features:

- Central system settings for external (offer templates) and internal export templates
- Individual permissions
- The settings are backward-compatible
- Introduction of a new functional right for executing exports in general

Export Templates												
ID	Active	Configuration File	Export Template	Name	Name [German]	Name [English]	Project Type	Origin Type	Origin	Rights	Comment

40	<input checked="" type="checkbox"/>	CBD_DAI_3.0.1_EN.cbd	CBD_DAI_3.0.1_EN.xlsm	&Daimler 3.0.1	&Daimler 3.0.1	&Daimler 3.0.1	Costing Type Si...	Customers	Daimler	...		
+	<input type="checkbox"/>									...		

Function Call

- The export of internal and external templates can now be accessed centrally from one location in the ribbon.
- The templates are only displayed if the conditions (permissions, scope) are met.

1.3.2 CALC4XL Benchmark Data for Overhead Rates

Starting with version 15.1, benchmark data for overhead rates from our partner CALC4XL are available within the application. Overhead rates, totaling around 70,000, are provided across materials, manufacturing, development, sales, and administration for 180 countries and regions.

Production Planning

Production Period

Begin (SOP):

Duration: ☐ fix a Month(s)

End (EOP):

Fiscal Years	Quantity Distribution	Gross Quantity	Deduction [%]	Quantity	Total Quantity	Number of Lots	Purchased Lot Size	Location	Receiving Country Group

(0249) Production Overheads Def [%]	3,32	
(0609) Administrative Overheads Def [%]	10,65	
(0619) Sales Overheads Def [%]	10,06	

Older Content Versions (crazemedia)

- Overhead rates from crazemedia are not automatically deleted.
- Overhead rates from crazemedia are no longer updated but can still be used in parallel with the new overhead costs.
- A notification appears when older overhead rates are used.

Enhancement Data Administration and Project

- The user interface for selecting overhead rates has been revised.
- No changes have been made to the integration of overhead rates in the project.

Import / Update

- The overhead rates are included in the content package (zip file) and can be imported into the application through the "FACTON Content Update"

1.4 OTHER ENHANCEMENTS

1.4.1 Reporting

- Location parameters such as energy tariffs and footprint costs are now provided in the data channels "MultipleFilteredStructureReport" and "FilteredStructureReport".
- When exporting multiple reports to a single PDF (multi-reporting), the project number (not the internal ID) is now included in the file name.

1.4.2 Excel Import

- Target costs can be imported via the Excel bill of materials (BOM) import.
- Overhead rates (basic data) can be imported or updated in the FACTON Data Administration via the Excel master data import.
- The internal project ID can now be used as a unique identifier for referencing sub-projects during the Excel bill of materials import.

1.4.3 Miscellaneous

- It is now possible to display SOP and EOP columns in the Workspace Explorer.
- In the system settings (System | Programs and Take Rates), it can be configured whether the quantities determined by the take rate logic are applied to the net or gross quantity.
- Part-specific attributes can now be displayed in the Batch Data Administration under "Parts – Calculation Mode."
- A new permission has been introduced to synchronize costing types.
- A new conditional permission has been introduced to create costing types.
- The short name of surcharges (basic data) is now displayed as column "ID" in the Data Administration for easier identification.
- Quotation Calculation: Exporting calculation results to **Tesla's** quotation template is now supported.

- Quotation Calculation: Exporting calculation results to **BMW's** quotation template (**QAF 9.0 01_23**) is now supported.
- The FACTON status bar now displays whether the system is in maintenance mode.
- Copying formatted integer values (e.g., with thousand separators) into FACTON is now supported. Therefore, removing the formatting before copying is no longer necessary.

2. BUG FIXES

2.1 FACTON EPC 15.1 CM

- **FD #19534:** During the Excel BOM import, the settings for manual and calculated machine cost rates are now correctly applied from the Data Administration when the field was not explicitly mapped.
- **FD #19557:** An issue with directly editing cycle time, cavities, and number of operators in the List Style was fixed. Changes to the calculation results are now displayed immediately.
- **FD #18958:** An error when resizing columns has been fixed. The error could result in a client crash.
- **FD #19723:** An error in the display of the machine cost rate in the insert dialog was fixed.
- **FD #19777:** An error when importing standard parts in the Excel BOM import was fixed.
- **FD #19632:** An error in the report "JahresvorschauStrukturReport" (annual preview structural report) has been fixed where the defined level depth was not taken into account for multi exporting ("MultiExportReportChannel").
